

Tejeshwara Maran

Computer Science Undergraduate

AI | IoT | Data | Software Development

About me

Fourth-year Computer Science student with hands-on experience in artificial intelligence, data analysis, software development and intelligent systems through academic and team-based projects. Experienced in Python, model development, testing, troubleshooting and developing practical technology solutions. Strong analytical, communication and problem-solving skills, with a keen interest in AI, process automation, digital transformation and applying technology to improve business processes.

Language and interpersonal skills:

- Languages: English (Fluent) • Malay (Fluent) • Tamil (Fluent) • German (Currently learning A1)
- Interpersonal: Communication • Presentation • Teamwork • Leadership • Problem Solving

Community Service:

- Volunteer in a registered Charity organization: 10 years of active involvement in community and charitable initiatives; contributed to organizing activities, coordinating with volunteers and supporting community outreach programmes.

Education

Bachelor of Computer Science (Honours)

Universiti Kebangsaan Malaysia (UKM)

2023 - Present | Expected Graduation: 2027

Intern Availability: Current - February 2027

Relevant Coursework:

Artificial Intelligence • Soft Computing • Internet of Things • Design and Analysis of Algorithms • Advanced Database • Human Computer Interaction • Program Design and Problem Solving

Technical Skills

Programming:

Python, Java C/C++, HTML

AI & Data:

Pandas, NumPy, Scikit-fuzzy,

Data Preprocessing,

Machine Learning, Fuzzy

Inference Systems

IoT & Embedded systems:

ESP32, Arduino, Sensors &

Actuators, Firebase, Embedded

C/C++

Software & Development tools:

Visual Studio Code, Eclipse,

Google Colab, Arduino IDE,

Streamlit, Matlab

Selected Projects

Data-Driven Monotone Fuzzy Systems with Financial Data

Final Year Project | Python, Pandas, Streamlit, Fuzzy Systems, Data Analysis

- Developed a data-driven monotone TSK fuzzy inference system for financial risk evaluation using Python.
- Applied data preprocessing and Spearman correlation analysis to identify monotonic relationships between financial indicators and risk.
- Built interpretable fuzzy rules with triangular membership functions and combined positive/negative indicator models into a final risk score.
- Evaluated performance using RMSE, monotonicity verification and baseline comparison, and developed a Streamlit interface for visualization.

Smart Silent Help Request System

IoT Group Project | ESP32, C/C++, Firebase, HTML/CSS

- Developed a two-device IoT system using ESP32, PIR sensors that automated alert responses based on real-time sensor inputs.
- Programmed embedded logic to control LEDs and a buzzer based on sensor inputs.
- Integrated Firebase Realtime Database for device-to-device communication and built a browser-based monitoring interface with remote reset functionality.
- Troubleshoot GPIO configuration, sensor readings, network connectivity and device communication.
